Rulesets / New branch ruleset

Protect your most important branches

[Rulesets](#) define whether collaborators can delete or force push and set requirements for any pushes, such as passing status checks or a linear commit history.

Ruleset Name *

man-ruleset

Enforcement status

🕒 Disabled ▼

Bypass list

+ Add bypass ▼

Exempt roles, teams, and apps from this ruleset by adding them to the bypass list.

Bypass list is empty

Targets

Which branches do you want to make a ruleset for?

Target branches

Branch targeting determines which branches will be protected by this ruleset. Use inclusion patterns to expand the list of branches under this ruleset. Use exclusion patterns to exclude branches.

Branch targeting criteria**Add target** ▼**Branch targeting has not been configured**

Rules

Which rules should be applied?

Branch rules

- ☐ **Restrict creations**
Only allow users with bypass permission to create matching refs.
- ☐ **Restrict updates**
Only allow users with bypass permission to update matching refs.
- ☐ **Restrict deletions**
Only allow users with bypass permissions to delete matching refs.
- ☐ **Require linear history**
Prevent merge commits from being pushed to matching refs.
- ☐ **Require deployments to succeed**
Choose which environments must be successfully deployed to before refs can be pushed into a ref that matches this rule.
- ☐ **Require signed commits**

☐ Require signed commits

Commits pushed to matching refs must have verified signatures.

☐ Require a pull request before merging

Require all commits be made to a non-target branch and submitted via a pull request before they can be merged.

☐ Require status checks to pass

Choose which status checks must pass before the ref is updated. When enabled, commits must first be pushed to another ref where the checks pass.

☐ Block force pushes

Prevent users with push access from force pushing to refs.

☐ Require code scanning results

Choose which tools must provide code scanning results before the reference is updated. When configured, code scanning must be enabled and have results for both the commit and the reference being updated.
